Franklin have one daughter, Mrs. Henry D. Crosty, of Danielson.

Here's That Reo **One-Rod Control**

EASE OF OPERATION is one of the cardinal qualities of Reo

"The Incomparable Four."
THAT QUALITY, perhaps more than any other, commends this car to

YOU SEE THE PROOF of this in the overwhelming percentage of women who drive Rec cars as compared with those who drive others.

BUT THAT SAME quality—ease of operation—is responsible for many other things that only owners of Rec the Fifth cars fully appreciate. FOR, NO MATTER how expert you may be in handling a car—in clutch control and gear shifting—nevertheless you do miss once in a while, you

AND THE DAMAGE to your pride and your nerves is only a small part of the real damage—that which has resulted from the clashing of gear teeth and shock to bearings and other parts will show up later in the repair shop and the maintenance bill.

and the maintenance bill.

THAT REO CONTROL—the original "one rod" centrol; the original "center control"—is the biggest money saver the Reo engineers have ever been able to offer Reo buyers.

THE VERY FACT that instead of two hand levers; there is only one in Reo the Fifth, is important—one hand on the wheel, the other on the control, gives you confidence and vastly simplifies the operation.

WE'LL TELL YOU in the next ad, how the two feet control both brakes and the clutch—thus making these Roos the simplest cars to operate and control ever known.

BUT THERE'S ANOTHER fact that is not so apparent on the surface; one that all engineers appreciate and most owners; but one the buyer does not always grasp beforehand.

LIKE MANY OTHER BIG FACTS about Reo the Fifth; this is fully appre-

THAT IS THE CO-RELATION of all the parts in that Rec clutch and

the various elements of a transmission—the gear ratios, relative weights, speeds and "retarding influences" that result in silent (which means harmless) gear shifting.

THE REO ENGINEERS have done all your gear shifting for you in designing Reo the Fifth. It is scarcely necessary for you to think—just move the single lever to the position indicated on the index plate and without a sound; the right pair of gears slip in place.

SILENCE MEANS absence of shock to the gears; absence of undue strain to shafts; absence of injury to bearings.

ALL THESE YOU GET in Reo the Fifth "The Incomparable Feur"—known the world over as "the simplest car to control."

AND AS WE'VE shown, the same engineering that has produced that result that you can see, also produces another that you don't find out till later (unless you talk with an owner of Reo the Fifth), namely, that this is also the cheapest car of its size in the world to operate and maintain.

THE PRICE IS STILL \$875 f. o. b. factory; Lansing, Michigan; despite the present higher cost of both labor and materials.

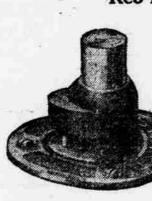

IF WE FOLLOWED the policy of others; and took advantage of the overdemand for this popular model, the price would be at least \$200 more—or the quality that much less.

BUT THAT ISN'T THE REO WAY. We still incorporate Reo quality:

BUT THAT ISN'T THE REO WAY. We still incorporate Reo quality; we still put "50 per cent oversize in all vital parts"—and as long as we can do so, will absorb the difference in cost, rather than increase the price. BUT THAT ISN'T to be taken as a promise that the price of this "Incomparable Four" will always remain at \$875. It may be absolutely necessary
